

# S6300-DES Series

Slave Delayed Egress Mortise Exit Devices

**SDC's S6300-DES series slave operating exit devices secure the door in a delayed egress system.**

Depressing the push pad activates the trigger input of a 101-DE series delayed egress controller, initiating the 15 or 30 second unlock cycle.

Slave operating delayed egress exit device models are available for both panic and fire-rated applications.

**Slave operating exit devices do not function on their own. S6300-DES series devices must be ordered with a 101-DE series delayed egress controller.**

- Panic and fire rated devices
- ExitCheck® slave operation
- Push pad activation trigger
- Low power consumption, energy saver
- Voltage and current spike protection

*\*Key cylinders not included, order separately. See related products.*
